

NOTICE

There has been a possible report of Parvo virus exposure at the Schultz Dog Park.

Exposure is defined when a dog showing symptoms of Parvo and testing positive for Parvo has come in contact with other dogs.

While the city staff is careful to keep the dog park as clean as possible, it is beyond the scope of anyone to eliminate Parvo from the soil.

Please do not use the park if your dog has not been vaccinated or if your dog shows signs of sickness
